

# Overnight's USD+ Offers Stablecoin Treasury Solution for Crypto Startups

What's better than a successful ICO or launch of your crypto project? What if you could generate more runway from the crypto stored in your treasury?

Enter USD+. This yield-generating stablecoin automatically airdrops USD+ to your wallet on the daily, no staking required. Your USD+ is pegged to—and instantly redeemable in—USDC, otherwise known as the stablecoin USD Coin.

You probably raised your project's funds in Bitcoin or Ethereum, but with the price volatility of these cryptocurrencies, you need a safer storage option. Converting your treasury into a stablecoin like USD+ protects the value of your treasury, by being pegged to a cryptocurrency—USDC—that is pegged 1:1 to the U.S. dollar.

You launched your crypto project to make a fantastic product, not speculate on the prices of crypto. USD+ both protects your treasury from downside and generates daily upside, all without staking. Sounds pretty ideal!
